

## Imaging Services

Regular X Ray

Digital X Ray

### **This is the same dog, different x ray machine.....**

This is the quality of our new digital X-ray machine. It looks nice, but that isn't why we chose it! It benefits you and your pet!

This state of the art machine provides:

Improved diagnostic capacity with better imaging, enlargement capabilities and computer enhancement

Increased safety - faster exposure time means less stray radiation for pets and our staff

Less exposure because we can get the image we need the first time

Images in six seconds so we can get more information, faster

Better for the environment - no chemicals or film to dispose

Images can be copied to disc or e-mailed for referrals to specialists if necessary

Made by Sedecal Vet-Ray, Sold and Serviced by Stewart X-Ray Co

The top image was taken of a then six year old dog about two years ago with our old conventional film X-ray machine. If you look closely, you may see a fusion of her spine.

The middle image was with our new Sedecal Vet-Ray Digital Imaging System, taken of the same dog two years later. Note the contrast and detail. We are also able to modify the contrast and zoom in on different portions of the image to emphasize different aspects to give the doctors a complete look for evaluation.

Your browser may not support display of this image. The image to the right is another view of the same dog, focused on the natural fusion of her spine. This image has been zoomed in, to emphasize the utility and functionality of this feature.

It is a much better tool for our doctors to identify what the picture reveals, especially for the smaller animals who may have tiny little bones.

**All this good stuff, and environmentally friendly and safer too!**

The bottom image is another view of the same dog, focused on the natural fusion of her spine. This image has been zoomed in, to emphasize the utility and functionality of this feature. It is a much better tool for our doctors to identify what the picture reveals, especially for the smaller animals who may have tiny little bones.
